

“Recently announced acquisitions in the Cortez Gold Trend provide new opportunity for a major copper and gold discovery in Nevada”

CROSS PROJECT ▶ GOLD

- ▶ Project is located on the well known Cortez (Battle Mountain/Eureka) Trend and has the potential for sediment-hosted gold deposits.
- ▶ Gold mineralization is associated with hematite-stained and highly fractured dolomite domains within a thick limestone formation with cross cutting bodies of siliceous breccia also present.
- ▶ A 3,000 metre long by 100 metre wide corridor has been outlined by a combination of rock chip sampling and 24 scattered and variably oriented reverse circulation drill holes.
- ▶ Previous exploration and drilling found gold and highly anomalous pathfinder element values in jasperoid, breccias, altered dikes and altered beds of calcareous siltstone - up to 5 g/t of gold in outcrops.
- ▶ The Company expects to explore the Cross property through the course of 2011 through a programme of geological mapping, advanced soil geochemical techniques and drilling.

SILVER KING PROJECT ▶ COPPER ▶ GOLD ▶ SILVER

- ▶ The original Silver King Mine was sporadically developed from 1870 to the 1930's by selective mining of high grade silver, lead and zinc mineralization.
- ▶ Select dump samples from the workings have been reported to contain up to 0.11 oz/ton gold, 55 oz/ton silver and 1.7% copper, along with significant zinc and lead values.
- ▶ The geological relationships indicate that the silver-lead mineralization is likely evidence of a skarn at surface and a much larger porphyry copper system at depth.
- ▶ Anaconda Company drilled Silver King in 1980 testing geophysical anomalies, two of these holes intersected well developed copper mineralization in both skarn and intrusive porphyry.
- ▶ Subsequent exploration involved IP, magnetic and soil geochemical surveys which detected two northwest-trending anomalies that are at least 600 metres long and each over 100 metres wide.

CORPORATE SNAPSHOT

(As of June 15, 2011)

Incorporated:	May 1993
Shares Outstanding:	62,697,923
Market Capitalization:	\$7.5M Cdn.
Options Issued:	4,300,000
Warrants Outstanding:	5,015,000
Fully Diluted:	72,012,923
Recent Price:	\$0.12
Year High/Low:	\$0.21/\$0.10
Average Daily Volume:	150,000

“An exploration program will follow up on the historical work with the aim on defining large tonnage copper and gold deposits at the Company's Nevada Projects”

INVESTMENT HIGHLIGHTS

- ▶ An exploration company with knowledge, discipline, expertise and a history of exploration successes combined with a new focus on copper and gold exploration in Nevada and British Columbia.
- ▶ Gold production in the USA from 1981 thru 2009 was 224 million ounces of which 157 million ounces were produced from the Carlin Trend and other Nevada gold deposits.
- ▶ The Urumalqui silver/gold project in Peru reported initial results with grades up to 28.34 ounces per tonne of silver equivalent from the first 6 holes of the 5,000 meter - 29 core hole in-fill drilling program.
- ▶ New acquisitions in Canada and the USA combined with recent exploration results create the potential for significant upside to the Company's current low market capitalization and share price.

MANAGEMENT TEAM

Jerry Blackwell ▶ President & CEO, a professional geologist who has worked continuously in the mining exploration industry since 1970. He has been a lead geologist in several discoveries in both North and South America.

Kerry M. Spong ▶ CFO, an experienced financial officer who has maintained an accounting and financial consultancy for public mining companies for over 17 years.

Lyle R. Hepburn ▶ Corporate Secretary, a Toronto-based lawyer that specializes in representing public mining companies.

Kenneth D. Booth ▶ Director, a businessman using his past investment banking experience with RBC and Nesbitt Burns to create new opportunities for both private and public exploration companies.

Edmund T. Kimura ▶ Director, a professional geologist who has over 40 years of experience in exploration and the mining industry.

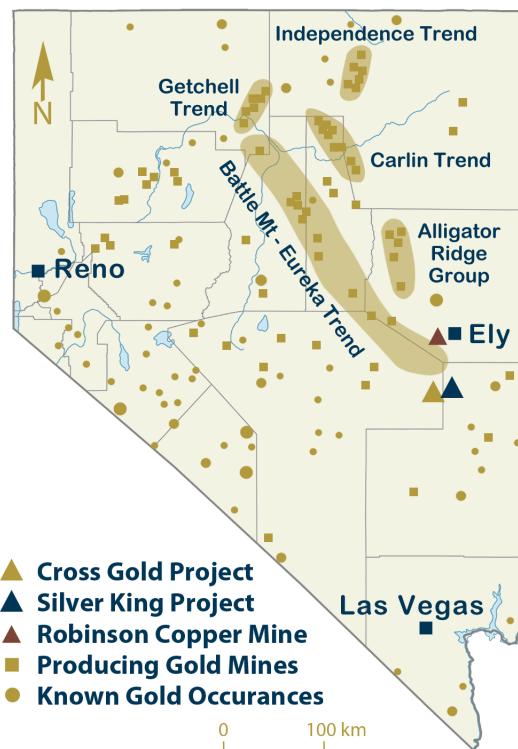

Victor A. Tanaka ▶ Director, a career geologist with 40 years of international experience in exploration and mine development.

Nevada Gold ▶ Copper Production

- ▶ In 2008 Nevada produced 75% of the U.S. and 7% of the World's gold.
- ▶ To date the Carlin Trend has produced more than 74 million ounces of gold.
- ▶ The Robinson Mine near Ely produced 123 million pounds of Copper in 2009.
